

Define and Manage XMS Realty Search Price Ranges

By: Fred Mac Donald
Sunday, 13th October 2013

Price Ranges are only used in the "Traditional Search" facility.

This will allow you to customise the drop down list when the buyer needs to select the price range he/she is interested in.

The image shows a search interface with a yellow 'Search' button at the top. Below it are several dropdown menus: 'Listing Type...', 'Property Category...', 'Country...', 'Region...', 'City...', and 'Min Price...'. The 'Min Price...' dropdown is highlighted with a green border, and its list of options is visible: 'Min Price...', 'POA', '€ 100', '€ 200', '€ 100 000', '€ 200 000', '€ 300 000', '€ 400 000', and '€ 500 000'.

To manage these log in and navigate to the Administration Section » Dashboard » Manage Property » Price Range

This is a simple screen to change the type or add a new type.

When the user selects a minimum and or maximum price range the search results will display all properties falling within the range (inclusive)

If you do not define a price for a property a value of "0" will be used and it will be filtered as POA by the search engine.

Search results without either a Minimum or Maximum value will include POA properties
